SMART WIRELESS SOLUTIONS

ADCON
TELEMETRY

Get data conveniently via radio – solar powered and almost real-time

Leak and burst detection – Pressure and flow monitoring – Reservoir and well monitoring

WHAT WE PROVIDE

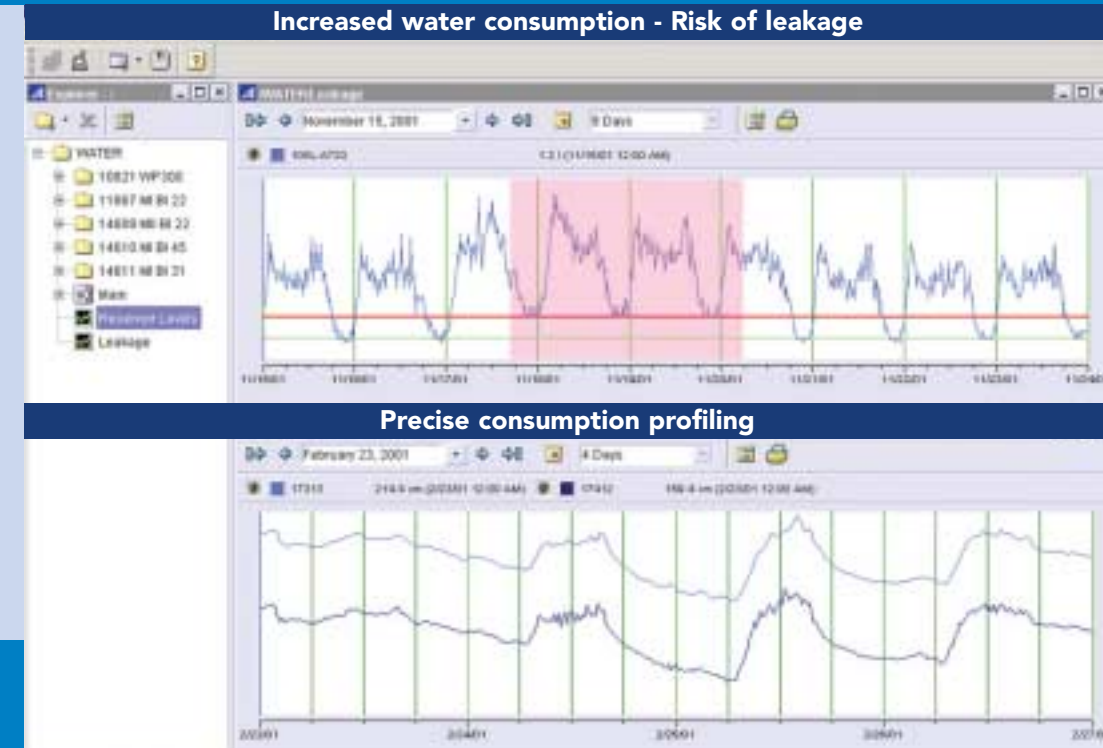

- Accurate data acquisition
- Compatibility with other remote control systems
- Reliable radio data transfer
- Large-scale measurement networks
- Data availability from SQL database
- Leak and burst detection
- Pressure, flow and level monitoring
- Access control system for important sites

THE BENEFITS AT A GLANCE

- Get important information anytime, even from remote locations
- Detect leakages immediately
- Create precise consumption profiles
- Detect unauthorized access to your remote sites
- Timely start of required actions
- Improve environmental stewardship
- Save energy, time and money
- Increase your profitability

THE TECHNOLOGICAL EDGE

- Highly accurate sensors
- License free radio technology
- Year-round solar powered operation
- Scalable network capabilities
- Statistics, alarms and historical records
- Easy to install and maintain - easy to expand

Monitoring your water resources

Regular and precise monitoring of water supply facilities is highly important for maintaining a well-balanced water supply. Adcon offers the easiest and most cost effective solution for collecting all data required for efficient water management, easy, comfortably and effortlessly. Our solar powered radio technology continuously transmits the data directly to your office allowing for quick and precise management decisions.

Remote locations and weak signal areas – one of the easiest tasks for Adcon systems

- Leak detection
- Reading of large industrial water meters
- Level monitoring
- Flow monitoring
- Pressure monitoring
- Exact logging of pump and system run times
- Water quality monitoring
- General environmental monitoring

"The Adcon system helps us to detect leakages within a very short period of time, often on the next morning. This is an incredible improvement to prior practice and means a significant reduction in controlling efforts which enables us to manage precious staff resources much more efficiently". Wolfgang Thurner, East-Austrian Water Distribution
